

MAC ROY TCHUILENG SIMEN

1 Year Experienced Full-Stack Developer

819-701-8694 • macroysimen@gmail.com • [LinkedIn](#) • [GitHub](#) • Trois-Rivières, QC

PROFESSIONAL PROFILE

Spring 2026 Computer Science graduate from UQTR with 1+ year of hands-on experience building scalable web applications and AI-powered solutions. Rapidly integrated into CGI's internal AI development projects in January 2026, demonstrating exceptional adaptability and technical acumen.

From architecting GRC SaaS platforms serving multiple enterprise clients to developing intelligent PDF extraction systems, I bring a unique blend of analytical rigor (2nd in Canada for Mathematics, 1st for Astrophysics) and full-stack expertise. Trilingual professional (French/English/Spanish) passionate about transforming complex business challenges into elegant, efficient code—no coffee required (well, almost).

CORE COMPETENCIES

Full-Stack Development	Django REST Framework • SvelteKit • React/React Native • Spring/Spring Boot • Node.js • Angular • TypeScript
Backend Technologies	Python • Java • C# • ASP.NET • PostgreSQL • MySQL • Oracle • RESTful APIs
Frontend Excellence	Svelte • React • HTML5/CSS • Tailwind CSS • Responsive Design • Mobile-First Architecture
AI & Data Science	Python • NumPy • Pandas • Scikit-learn • Matplotlib • AI System Optimization
DevOps & Tools	Docker • Git/GitHub/GitLab • pytest • Railway • Google Cloud • Firebase • CI/CD • Maven/Gradle • Netlify • Cloudinary
Architecture & Design	Microservices • Design Patterns • RESTful Architecture • MVC • GoF Patterns

PROFESSIONAL EXPERIENCE

Full-Stack Developer | [CGI](#)

Jan 2026 - May 2026 • Shawinigan, QC

Intelligent Timesheet Management System | AI-Powered PDF Data Extraction

Rapidly integrated into CGI's internal AI development initiatives, spearheading the creation of an intelligent timesheet processing system that transforms unstructured PDF documents into actionable data. Architected a robust extraction pipeline achieving 80%+ accuracy while handling diverse document formats across multiple systems.

Key Achievements & Impact:

- Engineered automated PDF data extraction system, dramatically reducing manual time entry and human error
- Implemented comprehensive pytest suite validating 80%+ extraction precision across varied document structures
- Designed modular, testable backend architecture enabling seamless integration with payroll and project management systems
- Established multi-level validation pipeline with sophisticated quality control mechanisms

- Optimized extraction algorithms through iterative debugging, significantly improving accuracy and processing speed
- Created detailed technical documentation facilitating system maintenance and future enhancements

Technologies: Python • pytest • PDF Parsing • Git • Machine Learning • Data Validation

Full-Stack Developer | Octosafes (Safeguard)

May 2025 - Jan 2026 • Lévis, QC

Enterprise GRC SaaS Platform | Multi-Tenant Architecture

Core contributor to Safeguard, an enterprise-grade Governance, Risk & Compliance platform serving multiple organizational clients. Architected and implemented critical full-stack features using Django REST Framework and SvelteKit, delivering a seamless, responsive experience for compliance and risk management professionals across all device types.

Key Achievements & Impact:

- Architected sophisticated three-tier hierarchical permission system (Super Admin, Organization Admin, User) enabling granular access control
- Developed intelligent notification system leveraging Django Signals and ContentType for real-time assessment assignments
- Crafted responsive Svelte components with adaptive UI/UX (mobile/tablet/desktop) using Tailwind CSS, ensuring consistent experience across platforms
- Built complex multi-step wizard forms with dynamic validation and sophisticated state management
- Integrated enterprise-controllable AI recommendation engine for compliance optimization
- Resolved critical SvelteKit-Django integration challenges including API routing and request interception
- Implemented complete internationalization (i18n) with Paraglide supporting French/English multilingual operations
- Configured and managed Docker infrastructure ensuring reliable deployment and scalability

Technologies: Django REST Framework • SvelteKit • TypeScript • PostgreSQL • Docker • Tailwind CSS • Paraglide i18n • Django Signals

Full-Stack Developer | Shek's House

Jan 2025 – Jan 2026 • Montréal, QC

E-commerce Platform | Multi-Category Online Retail

Core developer behind Shek's House, a multi-category e-commerce platform covering fashion and home products. Designed and implemented end-to-end shopping workflows including authentication, product discovery, checkout, payments, and order lifecycle management, delivering a complete online retail experience from catalog to invoicing.

Key Achievements & Impact:

- Designed and developed full customer authentication workflows including account creation, login, and secure password recovery
- Implemented structured product catalog navigation (departments, categories, search, product detail pages) improving content discoverability and user flow
- Built dynamic shopping cart system with quantity management and automatic price/tax calculations
- Integrated secure payment processing via Stripe enabling seamless checkout and automated order confirmation
- Developed promotional engine supporting percentage discounts, fixed values, free shipping, and "Buy X Get Y" campaigns

- Architected order tracking workflow covering complete lifecycle (confirmed, processing, shipped, delivered, canceled)
- Implemented invoice generation and download functionality to support transparent customer billing
- Organized backend architecture using Node.js/Express with structured asset and media management for maintainability
- Contributed to deployment pipelines using Railway and Netlify for stable production releases

Technologies: Node.js • Express.js • JavaScript • HTML5 • CSS3 • Stripe API • Git/GitHub • Railway • Netlify • E-commerce Architecture

Programmer Analyst | Data Annotation

Jan 2025 - May 2025 • Trois-Rivières, QC

Played instrumental role in AI system development lifecycle, from conception through optimization, ensuring high-quality training data and model performance.

Technologies: AI Development • System Optimization • Data Analysis

Full-Stack Mobile Developer | BluM - Recipe & Meal Ordering App

May 2024 - Sep 2024 • Trois-Rivières, QC

Cross-Platform Mobile Application | React Native + Node.js Backend

Conceived and developed BluM, a comprehensive mobile application combining recipe discovery, step-by-step video-guided cooking tutorials, ingredient ordering, and meal delivery—all in one seamless platform. Built end-to-end cross-platform solution from concept to deployment.

Key Achievements & Impact:

- Architected full-stack mobile solution with React Native/Expo frontend and Node.js RESTful backend
- Implemented secure authentication system with email-based password reset and user profile management
- Developed interactive recipe catalog with multi-country filtering, ingredient visualization, and nutritional alerts
- Integrated step-by-step video tutorials guiding users through meal preparation
- Built e-commerce functionality enabling ingredient purchases and prepared meal ordering
- Created deep-link redirect server for seamless email-to-app navigation and password reset flows
- Ensured cross-platform compatibility (iOS/Android) through rigorous testing and debugging

Technologies: React Native • Expo • Node.js • Express.js • React Navigation • EAS • Mobile Development (iOS/Android)

Backend Developer | Around the World

Sep 2025 - Dec 2025 • UQTR

Academic Project

Designed and architected "Around the World," a sophisticated multiplayer board game application demonstrating mastery of advanced design patterns and enterprise-grade software architecture principles.

Key Achievements:

- Architected scalable Spring Boot backend supporting concurrent multiplayer game sessions
- Implemented Observer and Strategy design patterns for maintainable, extensible architecture
- Developed player progression tracking system across virtual country destinations
- Built session management enabling multiple simultaneous games with isolated state

Technologies: Java • Spring Boot • Design Patterns • Maven/Gradle • Git

EDUCATION & ACADEMIC EXCELLENCE

Bachelor of Science in Computer Science - Software Development *Université du Québec à Trois-Rivières (UQTR)* • Jan 2023 - May 2026 • **High Distinction**

Bachelor of Science - Mathematics & Physical Sciences *École Nationale Supérieure Polytechnique, Yaoundé* • Sep 2021 - Sep 2022 • **Distinction**

AWARDS & CERTIFICATIONS

 Competitive Achievements

- 2025 - 2nd Place in Canada, International Youth Mathematics Competition (IYMC)
- 2024 - 1st Place in Canada, International Astrophysics Competition - National Champion

 Professional Certifications

- Meta Front-End Developer Professional Certificate (Coursera): UX/UI Design, React, React Native, Mobile Development
- Artificial Intelligence Certificate - EdX
- Version Control & Programming with JavaScript - Coursera

EXPERTISE HIGHLIGHTS

Advanced (3+ years)	Python • Java • Git • Visual Studio Code • IntelliJ IDEA • HTML/CSS • Node.js • JavaScript • Teamwork
Proficient (2+ years)	Django • React • Spring Boot • PostgreSQL • Docker • Agile/Scrum • C# • ASP.NET
Competent (1+ years)	SvelteKit • TypeScript • React Native • Angular • C • C++
Languages	French (Bilingual) • English (Bilingual) • Spanish (Professional Working Proficiency)

PROFESSIONAL ATTRIBUTES

Core Strengths

- Proactive problem-solver with proven track record of delivering high-quality code under tight deadlines
- Natural team leader combining technical excellence with strong collaborative skills
- Exceptional adaptability—seamlessly transitions between technologies, teams, and project requirements
- Strategic thinker with analytical mindset honed through competitive mathematics and astrophysics
- Continuous learner passionate about emerging technologies and innovation

Beyond Code

- Mathematics competitions enthusiast - applying quantitative rigor to software challenges
- Multilingual communicator bridging diverse teams and international stakeholders
- Music, dance, and culinary arts—bringing creativity to technical problem-solving
- Chess and logic puzzles—strategic thinking applied to software architecture
