

Dear Hiring Team,

I'm excited to submit my application for junior developer opportunities within your organization. As a recent computer science graduate with hands-on experience building web, SaaS, and mobile applications, I'm looking to join a team where I can continue learning while contributing to meaningful products and real business solutions.

Over the past year, I have worked on multiple projects where I contributed across the full development lifecycle, from feature design to implementation and testing. My experience includes building backend services with Python (Django) and Java (Spring Boot), as well as developing modern frontend interfaces using JavaScript/TypeScript frameworks such as React and SvelteKit. These projects allowed me to strengthen my understanding of software architecture, API design, and collaborative development practices in agile environments.

I particularly enjoy solving practical problems and turning ideas into reliable, user-focused solutions. Whether implementing new features, improving existing workflows, or troubleshooting technical issues, I approach development with curiosity, ownership, and attention to quality. I'm comfortable working both independently and collaboratively, and I value clean code, clear communication, and continuous improvement.

Beyond technical skills, I bring strong motivation and a growth mindset. I'm eager to learn from experienced developers, contribute positively to team culture, and continuously expand my knowledge of modern development practices and tools. My goal is to build software that creates real value while growing into a well-rounded and dependable developer.

I would be happy to discuss how my background, enthusiasm, and technical foundation could contribute to your team. Thank you for taking the time to review my application, and I look forward to the opportunity to connect with you.

Sincerely,

Mac Roy Simen
